RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 86 pages. LC Number: KF27 . I519 2008b OCLC Number: (OCoLC)317891942 Subject: Enhanced oil recovery -- Technological innovations -- United States. Excerpt: . . . 11 through terrestrial sequestration using soils and trees, or by injection into geologic formations. Geological storage of carbon dioxide in porous and permeable rocks involves injection of carbon dioxide into a subsurface rock unit and displacement of the fluid or formation water that initially occupied the pore space. This principle operates in all types of potential geological storage formations such as oil and gas fields, deep saline water-bearing formations, or coal beds. Most of the potential carbon dioxide storage capacity in the U. S. is in deep saline formations. The BLM anticipates taking a leadership role, in collaboration with other agencies, in evaluating and developing, where appropriate, long-term carbon sequestration efforts. The BLMs existing administrative and regulatory framework will help facilitate future carbon sequestration demonstration projects and potentially, leasing, and ultimately inform a robust, coordinated regulatory regime. In addition to experience in administering a large-scale mineral leasing program, we have the regulatory expertise and an existing framework for issuing rights-of-way on public land...
